SPACEX: VALUATION ANALYSIS MODEL YEAR 2027

1. The following valuation is based on assumptions outlined in a Medium article published in Predict by Dr. Brian Scott Glassman. The article, accessible via the link below, provides the necessary background for understanding the assumptions and revenue projections referenced herein.

2. The article contains an unbiased SpaceX valuation model. The model shows the core drivers of revenue, profitability, and growth and is accompanied by a 40-page article. The author is a former senior mechanical engineer, NYU professor, and holds a PhD in Product Innovation.

3. The following valuation model accounts for revenues, costs, and profits from Starlink, SpaceX launch activities, and telecom services provided by Starlink. It does not model expenses related to R&D, administration, depreciation, or other areas, as that information is not currently available. As more information becomes available, those expenses will be added to the model through the GitHub repository. Work Sheets 3 through 8 contain input controls that allow you to update the model so others can edit it. All changes should propagate across the entire workbook.

4. The author is open to suggestions and can be reached by financial analysts at Brian.Glassman@gmail.com

SECTION 4: Selected Valuation Multiples

Conservative	**20.0x**	Discount for hardware/CapEx intensity, regulatory risk, execution uncertainty
Base Case	**25.0x**	Reflects strong growth, strategic moat, ~median of comps adjusted for sector
Aggressive	**30.0x**	Premium for monopoly-like launch position, Starlink network effects

Key Assumptions & Considerations:

- Base year: 2027 (NTM+1 from Jan 2026) - standard for high-growth IPO valuations
- Comparable companies selected for high-growth, tech-enabled business models
